

# Black Bears

*What color is a black bear? The question isn't so easy to answer! Black bears can be black, brown, or blonde. They look as different from each other as you look from your classmates.*

*Look in the tree. Do you see the black bear cubs? Cubs climb trees to get away from people and other animals. Mother bear does a good job of protecting her cubs. A black bear mom does some of the same things your mom does. She teaches her cubs what food to eat and how to make a den to sleep in. Even bear cubs learn how to make their bed!*
