### MEMORANDUM

TO: Colorado Parks and Wildlife Commissioners

FROM: Jeff Davis, Director

DATE: April 18, 2024

SUBJECT: Limited license recommendations for deer, elk, pronghorn, moose, and black bear

This letter is a summary and explanation of the enclosed Colorado Parks and Wildlife (CPW) annual limited big game license recommendations for the 2024 big game hunting season.

CPW is recommending a total of 236,500 limited licenses for deer, elk, pronghorn, moose, and bear. The statewide total is nearly identical to last year, with an important caveat described in the elk summary. These licenses will populate 2,800 individual hunt code quotas and represent the majority of the hunting opportunity for over 700,000 big game animals.

While there does not appear to be substantial changes this year, the 2024 recommendations are a continuation of reductions made last year (~32,000 licenses) in response to winter mortality in the Northwest Region. The unprecedented reductions made in 2023 and 2024 in the Northwest Region will allow herds to recover as quickly as possible. For 2024, substantial reductions extended beyond the Severe Winter Zone to include Middle Park, which has had 2 severe winters in a row.

For the other 3 CPW Regions, it is business as usual with license recommendations intended to manage those herds to Herd Management Plan (HMP) population and sex ratio objectives.

Thankfully, the winter of 2023-2024 was average in severity on the entire Western Slope.

Additional details are included in both regulation form and in a series of table summaries titled 2024 Big Game License Recommendations Summary. The summary tables were sent to the Parks and Wildlife Commissioners and posted to the CPW Commission webpage. They can be found at the following link:

[https://cpw.state.co.us/Documents/Commission/2024/May/Item.20.a\\_DRAFT\\_2024\\_Big\\_Game\\_License\\_Recommendation\\_Summary.pdf](https://cpw.state.co.us/Documents/Commission/2024/May/Item.20.a_DRAFT_2024_Big_Game_License_Recommendation_Summary.pdf)

Jeff Davis, Director, Colorado Parks and Wildlife

Parks and Wildlife Commission: Dallas May, Chair • Richard Reading, Vice-Chair • Karen Bailey, Secretary • Jessica Beaulieu Marie Haskett • Jack Murphy • Gabriel Otero • Duke Phillips, IV • James Jay Tutchton • Eden Vardy

Information in these tables, hereafter referred to as Summary Tables, transitions from a high-level summary to increasingly species-specific. Page 1 includes bulleted highlights and Page 2 has Regional and Statewide totals that are particularly informative. After that, each species has a table with license totals and changes for every population as well as figures and data demonstrating factors important to license setting.

The 2024 license recommendations are based on evaluation of previous harvest, age and sex classification data, survival estimates from GPS-collared animals, population estimates, herd performance and trends, hunter distribution, Big Game Season Structure (BGSS) dates and timing, past licensing trends, and social considerations for each big game herd in Colorado.

The Colorado Parks and Wildlife Commission (PWC) publicly approves each Herd Management Plan (HMP), Bear Management Plan, BGSS dates, and all limited license recommendations. The HMP for each herd incorporates the capability of the habitat to support big game populations, other social and biological limiting factors, and input from the public, organizations, and other agencies about their issues and concerns regarding hunting management and herd objectives. Annual harvest objectives and the resulting license recommendations for all hunts are designed to achieve the management objectives approved in the HMP. Female license increases are recommended in herds that are performing well and are within or above population objective ranges and female license reductions are recommended in herds that are within or below population objective ranges. CPW staff use previous 3-year averages of hunter success rates to predict current year harvest rates for setting license recommendations necessary to achieve harvest objectives.

A Data Analysis Unit (DAU) is the geographic area and identifying number of a relatively discrete big game population or herd. DAUs can contain multiple Game Management Units (GMUs), which are geographic areas delineated to distribute hunters.

## Deer

Approximately 225,000 hunters applied for Colorado deer licenses in 2024. The majority of deer hunting in Colorado is managed by limited licenses; the only exceptions are over-the-counter (OTC) white-tailed deer licenses available in the Southeast Region.

Statewide, CPW is recommending 88,000 deer licenses, which is 1,400 (-2%) fewer than last year. For the Northwest Region, we are recommending a reduction of 900 (-4%) deer licenses.

For all rifle seasons, we are recommending statewide total reductions of 600 (-1%) buck, 70 (-1%) either-sex, and 500 (-4%) antlerless licenses.

Plains deer quota recommendations are somewhat lower than last year by 1,100 (-5%).

Buck license recommendations were reduced in herds that are now within or below HMP sex ratio objective ranges. Examples include D-5 (North Tablelands), D-9 (Middle Park), and D-17 (Bailey).

Buck license recommendations were increased in herds that are within or above HMP sex ratio objectives. Examples include D-8 (State Bridge), D-24 (Disappointment), and D-30 (San Juan).

In DAUs where CWD prevalence is greater than 5%, management actions were taken to reduce prevalence, including buck license increases. An example is D-51 (South Grand Mesa) (9% prevalence).

These recommendations keep regular season doe licenses at the minimum of 10 licenses per hunt code for all deer DAUs west of I-25 that are below population objective. In these below-objective herds, the majority of doe licenses are private-land-only licenses to address game damage. Private-land-only licenses and licenses with special restriction to address deer conflicts near towns make up the vast majority of the doe licenses in below-objective herds.

Antlerless license reductions are recommended in herds that are within or below HMP population objective ranges. Examples include D-5 (North Tablelands), D-9 (Middle Park), and D-17 (Bailey).

Antlerless license increases are recommended in herds that are within or above HMP population objective ranges. Examples include D-8 (State Bridge) and D-30 (San Juan).

The statewide post-hunt 2023 deer population estimate is 376,000, down from 392,000 last year. Over the last 3 years, even prior to the severe winter, the statewide population estimate for mule deer was on a declining trend. The sum of statewide population objective ranges is 389,000-494,000 for all 54 deer herds combined. In 2023, 18 of 54 (33%) deer herds are within their HMP population objective ranges. Population objectives that are appreciably higher than population estimates reflect CPW's desire to stabilize, sustain, and increase mule deer populations.

The statewide deer population has averaged 415,000 over the last 10 years. The decade prior to that was marked by significant declines in the some of the large westernmost herds in the state. Diverse habitat types and environmental conditions around the state create considerable geographic variability in population performance.

CPW annually monitors well over 1,000 GPS-collared mule deer in five Intensive Mule Deer Monitoring Areas to estimate survival. CPW also conducts post-hunt herd inventories, primarily with helicopters, to estimate the sex ratios of males/100 females and the age ratios of young/100 females. In addition to survival rates, these ratios are needed to estimate

population size using population models. The Summary Tables include the number of animals classified and sex ratios by DAU, Region, and statewide.

The average of sex ratio objectives for deer herds statewide is approximately 30 bucks/100 does. During the post-hunt herd inventories in 2023, CPW staff classified 60,800 deer and observed an average sex ratio of 30 bucks/100 does, which is the same as 2022. The statewide average observed age ratio from helicopter inventory was 60 fawns/100 does, the same as observed in 2021 and 2022.

Some deer herds are performing well and others are stable but at much lower population sizes than desired. CPW has concerns about declines in many deer populations; however, statewide post-hunt averages of 30 bucks/100 does and 60 fawns/100 does are excellent and indicate that overall, deer herds are responding to management actions. Colorado remains a premier destination for deer hunters.

## Elk

In 2024, approximately 246,000 hunters applied for Colorado limited elk licenses. All rifle antlerless, muzzleloader, first, fourth, and late season elk licenses are limited.

Statewide, CPW is recommending 109,500 limited elk licenses.

Converting what were previously over-the-counter unlimited antlered rifle licenses to limited antlered rifle licenses in the Severe Winter Zone in DAUs E-2 (Bears Ears) and E-6 (White River) actually results in an increase of 6,950 limited antlered rifle licenses. Although this is an increase in limited licenses, there will be fewer hunters in E-2 and E-6 during the second and third rifle seasons compared to when OTC licenses were available. This limitation will result in approximately 1,600 fewer antlered elk license sales in E-2 and 1,700 fewer antlered elk license sales in E-6 from 2023 hunter numbers. Reductions were not as large proportionally in E-6 because the central and southern section had lower winter severity and mortality than the northern section of E-6 and E-2. The southern tier of E-6 is outside of the Severe Winter Zone and remains OTC for 2<sup>nd</sup> and 3<sup>rd</sup> antlered elk hunting. After accounting for these new E-2 and E-6 limited hunt code quotas, total statewide limited elk licenses are actually reduced by 5,000 (-5%).

Continuing with a 20-year trend, antlerless elk license recommendations are reduced from last year by 1,200 (-3%) to 42,800. The statewide total for antlerless elk licenses is now 32% of what it was at its peak in 2004 of 132,500.

CPW is reducing female and either-sex licenses by 4,100 (-11%) in the Northwest Region.

Antlerless license reductions are recommended in herds that are within or below HMP population objective ranges. Examples include E-2 (Bears Ears), E-6 (White River), E-7 (Gore Pass), E-8 (Troublesome), and E-13 (Williams Fork).

CPW is recommending few changes in female and either-sex licenses in other 3 Regions of the state.

Antlerless license reductions are the result of a combination of mortality from the severe winter of 2022-2023, herds achieving HMP population objectives through antlerless harvest, low calf/cow ratios reducing population productivity, and increases in HMP population objective ranges.

Antlerless license increases are recommended in herds that are within or above HMP population objective ranges. Examples include E16 (Frying Pan River) and E-20 (Uncompahgre).

The 2023 post-hunt population estimate is 303,000 elk. This is similar to the 2022 estimate as declines in the Northwest Region were offset by increases in other Regions. The statewide population had been increasing for 7 years until 2022, an expected response to reductions in antlerless harvest.

The sum of Colorado's post-hunt HMP population objective ranges for elk statewide is 259,600-317,300 for all 42 elk herds combined. Fifteen of 42 (36%) elk populations are within their HMP population objective ranges. The sum of statewide objective ranges is partially based on historic HMPs. Plans written before 2001 were written with outdated population models that underestimated elk numbers; as we update plans, many population objectives and achievement will change. Because season and license setting is designed to use antlerless harvest to bring elk populations to herd objectives, further reductions in antlerless licenses are anticipated in the future as more elk populations reach objectives or population objectives increase. Long-term experience with balancing stakeholder interests has informed CPW on the upper and lower social thresholds for elk population size in many herds, which benefits us greatly in herd management planning efforts.

CPW monitors nearly 800 GPS-collared elk combined in 3 Research study areas E-2 (Bears Ears), E-15 (Avalanche), and E-20 (Uncompahgre Plateau), 3 Elk Monitoring Areas (Middle Park, Gunnison, and South Park) that were initiated in 2022, and as part of numerous other projects.

The average of post-hunt sex ratio objectives in totally limited elk DAUs and expected sex ratios in over-the-counter DAUs for elk herds statewide is approximately 21 bulls/100 cows. In 2023, during the post-hunt herd inventories, CPW staff used primarily helicopter surveys to classify an incredible 109,000 elk, down only 1,000 from the 110,000 classified in 2022. The

observed statewide average sex ratio was 20 bulls/100 cows, down from 21 bulls/100 cows last year.

In E-2, post-hunt 2023, CPW classified 9,200 elk. As expected, observed sex ratios were low at 11 bull/100 cows compared to the 3-year average of 15 bulls/100 cow prior to the severe winter. CPW observed a calf ratio of 49 calves/100 cows, identical to the previous 3-year average.

CPW classified 13,900 elk in E-6. We observed 20 bulls/100 cows compared to the 3-year average of 22 bull/100 cows prior to the severe winter. CPW observed 43 calves/100 cows on these flights compared to the 3-year average of 44 calves/100 cows prior to the severe winter.

These two herds are among our most productive elk herds. Excellent forage conditions and lower animal densities resulted in high body condition this winter. In combination with license reductions, these factors point to a positive future for elk and elk hunters in E-2 and E-6.

During primarily aerial surveys over the past 20 years, CPW has documented declining calf/cow ratios in the southern half of the state. Northern Colorado historically has had higher calf ratios by about 10 calves/100 cows. In 2023, we observed a statewide average of 40 calves/100 cows during post-hunt herd inventories, the same as 2021 and 2022. Elk research and continued management changes are necessary since calf production remains low in many herds. Low calf ratios reduce the number of elk licenses CPW can issue.

Having a combination of units that are limited in all seasons and units with both limited and over-the-counter hunting seasons allows us to offer a wide range of hunting opportunities on the nation's largest elk population.

## Pronghorn

In 2024, approximately 102,000 hunters applied for limited pronghorn licenses. The majority of pronghorn licenses are limited, with the notable exception of over-the-counter archery licenses available in 70% of GMUs.

CPW is recommending 18,200 limited pronghorn licenses, down 500 (-3%) licenses from last year.

Pronghorn license reductions are the result of a combination of mortality from the severe winter of 2022-2023 in the Northwest Region, new updated HMPs which increased population objective ranges, previously high licenses to intentionally reduce populations, and lower fawn/doe ratios due to drought reducing population productivity.

Doe license reductions are recommended in herds that are within or below HMP population objective ranges. Examples include PH-9 (Great Divide), PH-3 (North Park), and PH-7 (Thatcher).

Doe license increases are recommended in herds that are within or above HMP population objective ranges. Examples include PH-20 (Wet Mountains).

The estimated statewide post-hunt pronghorn population is 59,000, down from 74,000 in 2022. This staggering decline is from the Northwest Region pronghorn estimate dropping from 22,700 to 10,100 (-55%) from winter mortality.

The sum of statewide population objective ranges for hunted pronghorn herds is 71,200-98,700 combined. Thirteen of 29 (45%) pronghorn DAUs are within HMP population objective ranges.

Pronghorn are productive and will respond quickly to improved habitat conditions and lower animal densities. Colorado offers some excellent hunting for one of North America's most iconic animals.

## **Moose**

In 2024, approximately 60,000 hunters applied for Colorado moose licenses.

CPW is recommending 668 limited moose licenses, an increase of 24 (+4%) from last year.

These recommendations include 285 (+17, +6%) bull and either-sex licenses and 383 (+7, +2%) antlerless licenses.

Antlerless moose license recommendations are designed to manage moose populations toward HMP population objectives and keep moose populations within the capability of their habitat. Additionally, antlerless licenses have considerably lower success rates than antlered licenses.

The estimated statewide 2023 post-hunt moose population is 3,500, the same as in 2022.

We now have moose hunting in 74 GMUs, up from 39 GMUs in 2013. We are fortunate our moose populations continue to do well because many other states are experiencing declines in moose. The growing number and distribution of moose in Colorado have resulted in greater hunting and viewing opportunities.

## Black Bear

In 2024, CPW is recommending 20,000 limited licenses for all seasons and methods of take for black bear. This is 80 less than last year and represents a <1% decrease in limited licenses. In 2024, statewide harvest is projected to be about 1,400 bears with a statewide total mortality of approximately 1,900 bears. As in recent years under the current Big Game Season Structure (BGSS), the availability of add-on OTC bear licenses in half of Colorado's 17 DAUs is expected to continue to help reach harvest objectives in those specific units.

Bear season structure changes implemented as part of the BGSS in 2020 were designed to remove unnecessary barriers to bear hunting whenever possible to achieve DAU harvest objectives, while still managing bear hunter crowding during the early seasons or in quality deer and elk units.

Current management objectives are to reduce bear populations in 9 DAUs and stabilize populations at present levels in the remaining 8 DAUs. These DAU objectives are what guided managers' selection between one of the two bear licensing strategies that are available to structure hunting opportunity under the 2020-2024 BGSS. Over-the-counter licenses will be available during archery, muzzleloader and concurrent rifle seasons in 9 DAUs (plus B-99 Eastern Plains), as well as in most PLO hunts.

License sales in 2023 appear to have stabilized around the levels seen in 2020 & 2021 and are no longer increasing. In fact, license sales in 2023 declined 4% from 2022, suggesting a level of demand saturation. This follows the large gains in hunter numbers seen in 2019 and 2020 due to the non-resident fee reduction and availability of OTC bear licenses in many DAUs. With the increased pricing for bear licenses in 2024, license sales may decline again this fall, particularly for non-residents. In general, increased hunter numbers in the DAUs identified for the unlimited add-on license strategy have provided additional harvest towards management goals.

## Conclusion

The 2024 big game license recommendations are based on substantial biological data in relation to Herd Management Plans, and provide for an economically significant and diverse amount of big game hunting throughout Colorado. These recommendations and the associated OTC licenses provide the opportunity for more than 300,000 hunters to enjoy the tremendous big game resources of the State. They also represent thousands of hours of employees' collective efforts to conduct herd inventories, obtain harvest estimates, incorporate this information into predictive models, and finally to set limited license recommendations. I am pleased to present these recommendations as a testament to the incredible wildlife resources CPW manages for the enjoyment of the people of Colorado and its visitors.

If you have any questions on this information, or anything else about limited license numbers, feel free to give me a call prior to the Commission meeting. Thank You.

# 2024 BIG GAME LICENSE RECOMMENDATION SUMMARY BY SPECIES

April 12, 2024

## SUMMARY

- CPW is recommending a total of 236,500 limited licenses for deer, elk, pronghorn, moose, and bear. This is nearly identical to last year, with a caveat described in the elk summary.
- CPW is recommending reductions in deer, elk, pronghorn, and bear licenses.
- CPW is recommending increases in moose licenses.
- Most of the reductions in deer, elk, and pronghorn licenses are a continuation of cuts made in response to the winter of 2022-2023 in the Northwest Region.
- Changes are smaller this year because of the 32,000 license reduction last year.

## DEER

- CPW is recommending 1,400 (-2%) fewer deer licenses than last year.
- For the Northwest Region, we are recommending a reduction of 900 (-4%) deer licenses.
- For all rifle seasons, we are recommending statewide total reductions of 600 (-1%) buck, 70 (-1%) either-sex, and 500 (-4%) antlerless licenses.
- Buck license recommendations were reduced in herds that are now within or below HMP sex ratio objective ranges. Examples include D-5 (North Tablelands), D-9 (Middle Park) and D-17 (Bailey).
- Buck license recommendations were increased in herds that are within or above HMP sex ratio objectives. Examples include D-8 (State Bridge), D-24 (Disappointment), and D-30 (San Juan).
- In DAUs where CWD prevalence is greater than 5%, management actions were taken to reduce prevalence, including buck license increases. An example is D-51 (South Grand Mesa) (9% prevalence).
- Antlerless license reductions are recommended in herds that are within or below HMP population objective ranges. Examples include D-5 (North Tablelands), D-9 (Middle Park) and D-17 (Bailey).
- Antlerless license increases are recommended in herds that are within or above HMP population objective ranges. Examples include D-8 (State Bridge) and D-30 (San Juan).

## ELK

- Statewide, CPW is recommending 109,500 limited elk licenses.
- Converting what were previously over-the-counter unlimited antlered rifle licenses to limited antlered rifle licenses in the Severe Winter Zone in DAUs E-2 (Bears Ears) and E-6 (White River) results in an increase of 6,950 limited antlered rifle licenses. These new quotas mask the actual reduction in total limited licenses.
- After accounting for these new E-2 and E-6 hunt code quotas, limited elk licenses are actually reduced by 5,000 (-5%).
- Continuing with a 20-year trend, antlerless elk license recommendations are reduced from last year by 1,200 (-3%) to 42,800. The statewide total for antlerless elk licenses is now 32% of what it was at its peak in 2004 of 132,500.
- CPW is reducing female and either-sex licenses by another 4,100 (-11%) in the Northwest Region.
- CPW is recommending few changes in female and either-sex licenses in other 3 Regions of the state.
- Antlerless license reductions are recommended in herds that are within or below HMP population objective ranges. Examples include E-2 (Bears Ears), E-6 (White River), E-7 (Gore Pass), E-8 (Troublesome), and E-13 (Williams Fork).
- Antlerless license increases are recommended in herds that are within or above HMP population objective ranges. Examples include E16 (Frying Pan River) and E-20 (Uncompahgre).

## PRONGHORN

- CPW is recommending 18,200 limited pronghorn licenses, down 500 (-3%) licenses from last year.
- Pronghorn license reductions are the result of a combination of mortality from the severe winter of 2022-2023 in the Northwest Region, new updated HMPs which increased population objective ranges, previously high licenses to intentionally reduce populations, and lower fawn/doe ratios due to drought reducing population productivity.
- Doe license reductions are recommended in herds that are within or below HMP population objective ranges. Examples include PH-9 (Great Divide), PH-3 (North Park, and PH-7 (Thatcher).
- Doe license increases are recommended in herds that are within or above HMP population objective ranges. Examples include PH-20 (Wet Mountains).

## MOOSE

- CPW is recommending 668 limited moose licenses, an increase of 24 (+4%) from last year.
- These recommendations include 285 (+17, +6%) bull and either-sex licenses and 383 (+7, +2%) antlerless licenses.
- Antlerless moose license recommendations are designed to manage moose populations toward HMP population objectives and keep moose populations within the capability of their habitat. Additionally, antlerless licenses have considerably lower hunter success rates than antlered licenses.

## BLACK BEAR

- CPW is recommending 20,000 limited black bear licenses, a decrease of 80 (less than 1%) from last year.
- Similar to previous years under the 2020-2024 BGSS, ten bear DAUs will have OTC licenses available during archery, muzzleloader and concurrent rifle seasons.
- The increases in bear license sales seen in 2019-2021 seem to have stabilized in 2022, with a small decrease in sales recorded in 2023 (-4%). Increases in bear license pricing for this upcoming fall, particularly for non-residents, might be expected to further decrease the number of licenses sold in 2024.

# 2024 BIG GAME LICENSE RECOMMENDATION DEFINITIONS

April 12, 2024

**Add-on Black Bear License:** Archery and muzzleloader unlimited OTC black bear licenses only available to purchase by hunters who have a deer or elk license for the same manner of take and GMU.

**Age Ratio:** Number of young-of-the-year per 100 females in a herd. Age ratios are observed during big game surveys and provide an estimate of the number of young that were born in summer and survived until the survey. Age ratios are a measure of herd productivity and are used in population modeling.

**Antlered License:** A deer, elk, or moose license that is valid for the take of any animal with an antler or antlers of at least five inches in length.

**Antlerless License:** A deer, elk, or moose license that is valid for the take of any animal without antlers or with antlers of less than five inches in length.

**Black Bear Age and Gender Composition:** Metrics used as indicators of black bear population trajectory in relation to harvest levels. Harvested black bears are divided into 4 age-sex classes (adult male, adult female, subadult male, and subadult female).

**% Adult Male in Harvest:** The adult male segment of a population is the first to be reduced under increasing hunter pressure, therefore proportions of adult males (>5 yr old) in the harvest can indicate stability, increase or decrease in the population.

**% Female in Harvest:** As harvest levels increase and additional adult and sub-adult males are removed, the proportion of females of all ages in the harvest begins to increase. Therefore, proportions of females of all ages in the total harvest can indicate stability, increase or decrease in the population.

**% Adult Females in Female Harvest:** With increasing harvest, younger females are removed and older females (>5 yr old) become more common in the harvest. Thus, the proportion of adult females in the female harvest should rise with increasing harvest rates, indicating stability, increase or decrease in the population.

**Classified Animals:** During big game surveys, animals are categorized by age and sex. That is, animals are identified as adult males, adult females and young-of-the-year. These classifications are then used to calculate sex and age ratios.

**Concurrent Rifle Season:** Limited and unlimited black bear seasons that occur during the regular deer and elk rifle seasons. There are both regular concurrent and PLO concurrent black bear seasons.

**Chronic Wasting Disease (CWD):** A fatal neurological disease that attacks the brains of deer, elk and moose.

**Data Analysis Unit (DAU):** The geographic area that represents the year-round range of a specific big game herd/population. Each DAU is composed of one or more Game Management Units (GMUs). DAUs are used to monitor distinct herds/populations.

**Either-sex License:** A license that is valid for the take of either male or female animals.

**Established Hunts:** Ranching for Wildlife and Auction & Raffle hunts or hunts approved annually by PWC.

**Game Management Unit (GMU):** A defined geographic area that provides a practical framework where management goals can be refined and applied on a finer scale than a DAU, typically through hunting regulations. GMUs are used to monitor hunter distribution.

**Leftover Draw:** Deer and elk applicants unsuccessful in the primary draw have the first chance at the limited licenses that are remaining after the primary draw by selecting Leftover Draw on their application.

**Limited Licenses:** A set (limited) number of licenses are available for specific units and dates for each species, and are initially issued through an application and draw process.

**Manner of Take:** Colorado hunting seasons are based on hunting methods (i.e., archery, muzzleloader and rifle/associated) permissible during each season.

**Modeled Estimates:** Mathematical models that integrate observed data (e.g., sex ratios, age ratios, population estimates, survival estimates, harvest estimates) are used to estimate the population size and demographic composition of each herd. Estimates derived from these models are referred to as modeled estimates.

**Non-Established Hunts:** Hunts and quota not specified in regulation and approved by PWC, or Ranching for Wildlife or Auction & Raffle hunts. Non-Established hunts include game damage, dispersal, youth and novice outreach, etc.

**Over-the-Counter (OTC) Season:** In contrast to limited seasons, licenses in OTC seasons are not available through the draw. They do not require buying/having a qualifying license, do not use preference points and may be purchased any time through the end of the season. Prior to 2020, the number of licenses available in OTC seasons were either unlimited or capped at a predetermined number. Starting in 2020, there are no longer OTC with caps seasons.

**Plains Units:** GMUs east of Interstate I-25 except unit 140.

**Private Land Only (PLO) License:** Licenses that are only valid on private land.

**Population Estimate:** The estimate of the number post-season (winter) animals in a herd. CPW estimates the size of each herd annually based on population models.

**Population Objective:** The target number of animals in a herd. Population objectives are expressed as ranges and are established in the Herd Management Plan (HMP) for each herd. License numbers and hunting strategies are designed to reach or maintain the population objective of each herd.

**Post-hunt:** The period after the hunting seasons. Most big game populations are surveyed post-hunt (in the winter), when they are concentrated at lower elevations in open terrain by snow, in order to estimate winter population levels and demographics.

**Pre-hunt:** The period before the hunting season. Many pronghorn surveys are conducted pre-hunt (in the summer) to estimate summer population levels and demographics.

**Primary Draw:** The first, main big game draw of the year for hunters applying for limited hunting licenses.

**September Rifle Season:** Limited rifle black bear seasons that occur during the month of September (before the regular deer and elk rifle seasons). The majority of black bear harvest occurs during these seasons and, therefore, they have the largest effect on black bear management.

**Sex Ratio:** Number of males per 100 females in a herd. Sex ratios are observed during big game surveys and used in population models. Sex ratio objectives are established for each herd in a Herd Management Plan. Hunting licensing numbers and strategies are established to achieve and maintain these objectives.

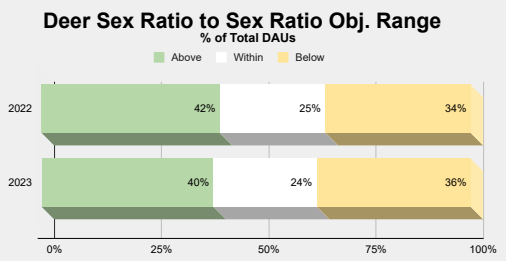

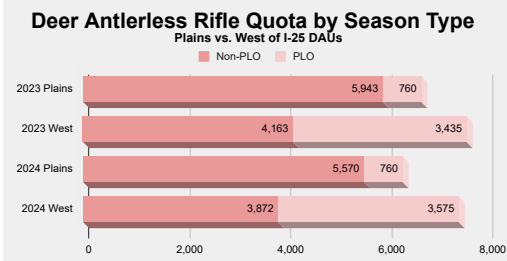

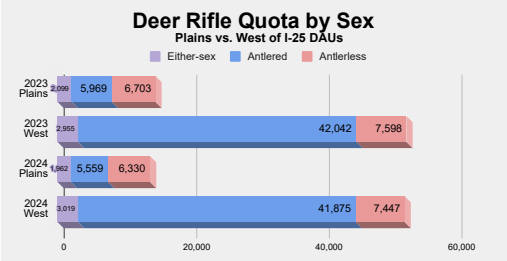

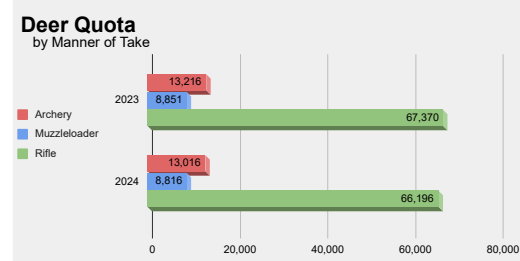

**Unlimited Licenses:** Licenses that are not restricted in number. They are not available through the draw.

**Weighted Average:** An average that is calculated taking population size into account, so that larger populations contribute more to the average than smaller populations (i.e., populations influence the average in proportion to their size).

**West of I-25 Units:** GMUs west of Interstate I-25 and unit 140.

# 2024 BEAR

Colorado Parks and Wildlife  
April 12, 2024

\*The 2020-2024 Big Game Season Structure created unlimited OTC black bear licenses in DAUs which have a management strategy of reducing bear populations and where harvest objectives are not being met.

\* Each incident report may be counted in more than one category.
