

2004/05 Small Game Harvest Report

The general small game harvest survey was conducted by phone. A sample of approximately 12% of the hunters in the HIP (Harvest Information Program) database (8299 out of 71,446) was drawn. The surveyor attempted to contact 70% of the sample within the time allowed. 3906 hunters were surveyed (47% response rate).

The report provides estimates of statewide harvest, days in the field, and hunter number by species. In addition, there are estimates for each species by county. Due to the small number of hunters who 1) hunt certain small game species, 2) may have hunted a given species in a given county, and 3) may have been contacted for the harvest survey, our county harvest estimates may be based on the responses of only 1 or 2 hunters.

Harvest estimates (county and statewide) are generated based on the responses of those hunters contacted for the survey. These responses then form the basis of an estimate of species harvest for the small game hunting public at-large.

Those portions of the report that have frequency designations or are pure percentages are based on the actual number of hunters surveyed and their responses to survey questions. ***The harvest figures are estimates of total harvest extrapolated from survey responses.*** The estimates are followed by the standard error (SE) of the estimate which is a measure of the precision of the estimate. By multiplying the SE by 1.96 you can obtain the 95% confidence interval. The 95% UCI and 95% LCI columns provide the upper and lower values for the 95% confidence interval around the estimate.

So, for example, we estimated statewide harvest of blue grouse at 21,840 with a SE of 65. The 95% confidence interval ranges from + or - $1.96(65)=127$. The range is $21,840-127=21,712$ to $21,840+127=21,967$. We are 95% confident that between 21,712 and 21,967 blue grouse were harvested during the 2004 season.
