Status/Ranking explanations and the sources of information

For Birds: Y = Year-round breeding resident, W = Winter, S = Summer, B = Known breeding populations, M = Migrant, I = Infrequently seen at the park

For Fish: N=native, I=introduced

Source Codes: O= Directly observed by consultant, by Colorado Birding Society (Richard Stevens, birdertoo@worldnet.att.net), Melissa Miller (U.S. Forest Service), Rocky Mountain Bird Observatory (Doug Falkner, pomjaeger@aol.com), or Allison Hilf (Ahilf@aol.com); D= Division of Wildlife Biologist, M= Mammals of Colorado; B= Birds of Colorado and/or Colorado Breeding Bird Atlas; L= Livo et al. 2000 (County record tables for Colorado amphibians and reptiles); H= Hammerson.

Likelihood to be Present codes: 1= Species verified & common; 2= Suitable habitat-species not verified, but likely common; 3= Limited suitable habitat-possibly present, but unverified, or Species verified, but uncommon; 4= Rare species- seen only occasionally during appropriate season; 5= Very rare species, very unlikely

Imperiled species are those with PIF (Partners In Flight) Tot=>21 or COVERS => 38; or CNHP =< S3 (For PIF, PT= Population Trend- Birds with high scores for PT are more demonstrably in need of conservation action than are birds with low scores; AI= Area Importance- =>3 indicates greater conservation value.)

Agency,federal or COstatus: E=Federally endangered;T=Federally threatened; PT= Proposed Threatened; C= Candidate;

SE= State endangered; ST= State threatened; SC= State species of concern; FS= Sensitive (identified by the regional forrester); BLM= Sensitive (found on public lands, similar to C).

CNHP Status: G= Global; S= State; 1= Critically imperiled because of extreme rarity; 5= Demonstrably secure; B= Breeding status; N= Non-breeding status; SH= Historically known but not verified for extended period of time; SZ= Migrant, occurrences too irregular, dispersed or transitory; T=Trinomial rank used for ssp.; SR= Reported to occur in state, but unverified; SA= Accidental in the state.
