Basis and Purpose:

Modifying property-specific regulations at Boyd Lake

These regulations have been updated to better maintain overall walleye and saugeye abundance and align management with angler preferences following a 73% increase in visitation over the last decade. To maintain fish abundance and meet angler priorities the bag and possession limits were reduced from 5 fish to 3 fish. Additionally, the rule that limited harvest to a single walleye and saugeye over 21 inches per day has been removed to align with the goal of prioritizing opportunity and quantity of fish over size of fish.

Updating regulations at Button Rock Reservoir

These changes remove the site-specific two-trout bag limit and seasonal fishing closure at Button Rock Reservoir, returning the fishery to statewide general bag and possession limits. Located in Boulder County, angler access to the reservoir is heavily restricted by a two-mile hike and a City of Longmont permit system that caps total annual users. Decades of creel survey data show a substantial decline in angler trout harvest, demonstrating that the restrictive two-fish limit is biologically unnecessary and that applying statewide harvest limits will not adversely impact the trout population. Additionally, removing the November 1 through April 30 fishing closure removes a fishing closure that is not under CPW's jurisdiction as it is instead a City of Longmont ordinance.

Modifying property-specific fishing regulations at Golden Park Ponds

Golden Ponds in Longmont is a group of 3 waters that offer angling for largemouth bass, crappie, channel catfish, bluegill, and hybrid striped bass, as well as seasonal rainbow trout. Currently, different fishing regulations apply to each pond. To reduce confusion, improve enforcement, and continue to offer quality bass angling while allowing anglers to use bait, the regulations have been updated to apply a catch-and-release regulation for all largemouth and smallmouth bass across all ponds.

Updating Lutz Reservoir regulations

To establish and maintain a high-quality warmwater fishery at Lutz Reservoir in Adams County, new regulations are being added ahead of its 2026 public opening. The changes will restrict fishing to artificial flies and lures only, enforcing mandatory catch-and-release for all largemouth and smallmouth bass, and establishing a 10-inch minimum size limit for harvesting crappie. Following recent habitat enhancements, draining, and refilling by the City of Brighton, CPW is restocking bluegill, black crappie, and predatory largemouth bass to rebuild the fishery. Because the reservoir is expected to face heavy angling pressure due to nearby housing developments, mandatory bass catch-and-release and artificial flies and lure restrictions are necessary to prevent overexploitation, minimize hooking mortality, and preserve bass populations. Additionally, the 10-inch minimum size restriction allows crappie to complete at least one natural reproduction

cycle before harvest, ensuring population sustainability and a superior long-term angling experience.

Restricting harvest and manner of take regulations for trout at Mill Creek

Following successful reintroduction efforts from 2022 to 2024, a self-sustaining population of rare San Juan lineage Colorado River Cutthroat Trout is now established in Mill Creek above a natural waterfall barrier. Because cutthroat trout are exceptionally vulnerable to angling pressure and overharvest due to their high catchability and slow growth, these changes add special protective regulations from Mill Creek's headwaters downstream to the northern boundary of the Mill Creek Subdivision. Implementing mandatory catch-and-release and restricting fishing to artificial flies and lures only will minimize hooking mortality, protect this rediscovered native genetic stock from overexploitation, and ensure the long-term conservation of the population.

Updating regulations at Willow Bend Natural Area Ponds (Willow Bend, Kingfisher, and Turtle)

These regulation changes implement mandatory catch-and-release regulations for all largemouth and smallmouth bass across the three recreationally open fishing waters at the newly developed Willow Bend Natural Area in Loveland. Fishery surveys on these ponds indicate the need to implement special regulations to protect fish resources as the ponds become more popular and additional angler-access amenities are constructed. Establishing consistent, easily enforceable catch-and-release rules across all three ponds will proactively protect these resident bass populations from overexploitation and ensure long-term, high-quality urban angling opportunities.

Establishing catch-and-release regulations for largemouth and smallmouth bass at the following Front Range locations: Arapahoe Bend Natural Area, Riverbend Ponds, Dixon Reservoir, Prospect Ponds, and Kyger Reservoir

To maximize the recreational value of these Front Range fisheries and to create a unique fishing experience within a small subset of the public waters on the front range, these lakes will now have catch-and-release regulations for largemouth and smallmouth bass at Arapahoe Bend Natural Area, Riverbend Ponds, Dixon Reservoir, Prospect Ponds, and Kyger Reservoir. Transitioning from restrictive harvest to a catch and release, "zero-harvest" model will preserve population size structures, provide an opportunity for natural reproduction, provide quality opportunities for urban anglers, and prevent overexploitation in these relatively small, but high-traffic environments. Intense suburban angling pressure can outpace the natural reproductive capacity of these ecosystems, leading to overexploitation and stunted populations. Implementing a catch-and-release model will protect adult fish, encourage natural reproduction, and establish a dedicated subset of urban waters capable of providing high-quality, trophy bass fishing opportunities for close-to-home anglers.

Updating property-specific regulations at Scotland Peak Reservoir

Ninety-nine individuals belonging to a genetically rare population of Uncompahgre Lineage Colorado River cutthroat trout were rescued from the Gold Mountain wildfire and Nate Creek near Ouray, on July 15, 2026, and were taken to the Rifle Falls isolation facility. These cutthroats will be stocked into Scotland Peak Reservoir located on the Grand Mesa. Given the extremely low number of rescued fish, the Nate Creek cutthroat strain cannot sustain any harvest and should be

protected by fishing with an artificial fly and lure only and all trout must be returned to the water immediately regulations. The Grand Mesa contains well over 100 stocked wild sport fisheries, most of which allow harvest and the use of bait. These regulation changes will protect these rare fish while having negligible reductions to recreational angling opportunities in the area.

Amending regulations to prohibit the use of any amphibian (alive or dead) as fishing bait

These regulation changes remove the allowance to take and use aquatic gilled tiger salamanders ("water dogs") and bullfrogs as bait. Under the updated rules, bullfrogs will be classified strictly as invasive species; anglers may still harvest them using additional approved methods (such as line, archery, or slingbow) with a valid fishing license, but they must be killed immediately and cannot be possessed or transported live or used as bait. The primary purpose of this rule change is to mitigate ecological risks, protect Colorado's native amphibian diversity, and align state regulations with neighboring states. Amphibians are globally vulnerable to habitat loss, non-native competition, and devastating pathogens such as ranavirus and chytrid fungi. Using tiger salamanders or bullfrogs as bait risks introducing invasive populations, which outcompete and prey on native wildlife, and spreading diseases that threaten native species. Because health inspection protocols for detecting amphibian diseases are not well-established, CPW determined that restricting bait sources to captive-bred animals would not sufficiently eliminate these risks. Therefore, these changes will prohibit the use of any amphibian either live or dead as bait.
