

2010/11 Small Game Harvest Report

The general small game harvest survey was conducted by phone. A sample of 8,483 was drawn from the Harvest Information Program database for this survey. The surveyor attempted to contact 70% of the sample within the time allowed. 4,004 hunters were surveyed (47% response rate).

For the 2010/11 survey, for species including chukar, jack rabbits, snow shoe hare, fox and pine squirrel, marmot, coyote, red fox, raccoon, badger, beaver, muskrat, Wyoming ground squirrel, rattlesnake, snapping turtle, and tiger salamander, harvest estimates were not collected, only hunter numbers were estimated.

The report provides estimated statewide harvest, days in the field, and hunter number for **10** small game species; pheasants, scaled, Gambel's and bobwhite quail, blue grouse, mourning dove, ptarmigan, cottontail rabbits, Abert's squirrel, and coyotes. In addition, there are estimates for each of these 10 species by county. The 2010/11 survey collected data specific to small game hunting on Walk-In Access lands. Specific questions were posed to hunters regarding their hunting for pheasants, scaled quail, mourning doves, bobwhites and cottontail rabbits, to measure participation, days, and harvest on WIA lands.

County harvest estimates may be based on a relatively small number of hunter responses and may be accompanied by large confidence intervals. Harvest estimates (county and statewide) are generated based on the responses of those hunters contacted for the survey. These responses then form the basis of an estimate of species harvest for the small game hunting public at-large.

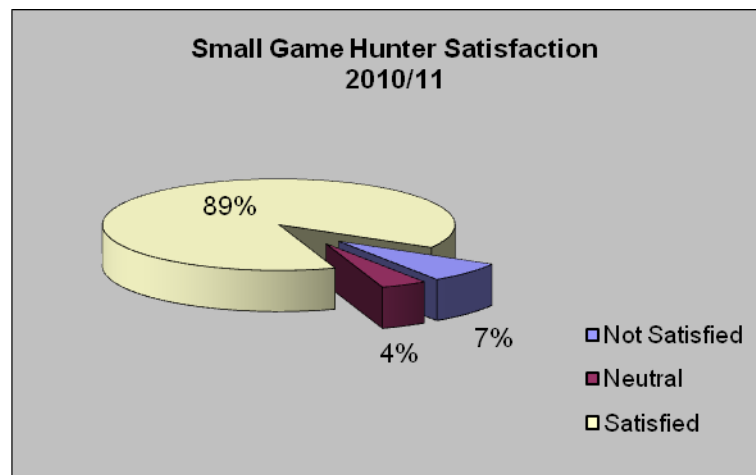

Those portions of the report that have frequency designations or are pure percentages are based on the actual number of hunters surveyed and their responses to survey questions. ***The harvest figures are estimates of total harvest extrapolated from survey responses.*** The estimates are followed by the standard error (SE) of the estimate which is a measure of the precision of the estimate. The 95% LCL and 95% UCL columns provide the upper and lower values for the 95% confidence limits around the estimate.

So, for example, we estimated statewide harvest of mourning dove at 209,244 with a SE of 10,165. The 95% confidence interval range estimates that between 190,250 and 230,133 mourning doves were harvested during the 2010 small game season.

Hunter Numbers, Other species
